PROFESSIONAL SUMMARY

- Senior Java Software Engineer with **9+ years** building distributed, cloud-based, and performance-critical backend systems using Java, Spring Boot, messaging, concurrency, and AWS.
- Combines backend engineering with prior leadership in accounting, financial operations, and financial analysis.

CORE COMPETENCIES

Java & Backend	Java, Spring Boot, Spring Framework, Hibernate, jOOQ, REST APIs, DDD, microservices
Distributed Systems	Event-driven architecture, Kafka, ActiveMQ Artemis, reliable integrations, concurrency, high-load systems
Cloud, Data & Delivery	AWS, Redshift, GCP, Docker, Kubernetes/OpenShift, PostgreSQL, MySQL, MongoDB, Redis, Maven, Jenkins, JUnit, Mockito, Testcontainers
Additional	Python, Clojure, C#, RxJava, Liquibase, Flyway, GitHub Copilot, OpenAI Codex

PROFESSIONAL EXPERIENCE

Senior Java Software Engineer | [DataArt](#)

Jul 2021 – Present

- Design and develop distributed Java services for financial-market, gaming, travel, and commerce platforms using Spring Boot, REST, Kafka, ActiveMQ Artemis, persistence, and caching.
- Diagnose production bottlenecks and improve latency, reliability, data consistency, and operational behavior across AWS, Docker, Linux, CI/CD, and monitoring.
- Updated SSL certificates, Java keystores, secrets, and deployment pipelines across Java services and DEV/QA environments, enabling validation and release before certificate expiry.

Backend Software Engineer | [DataFoundry AI](#)

Jul 2019 – Jul 2021

- Developed production backend systems using Java, Python, and Clojure for a global multi-tenant medical-research platform running on AWS.
- Redesigned Redshift distribution and sorting around tenant and query keys, reducing a key endpoint from approximately **60 seconds to 400 ms**.

Freelance Java Software Engineer

Apr 2017 – Jun 2019

- Developed Java backend services and desktop applications with transactional database design, integrations, business workflows, and reporting.

OPEN SOURCE & PORTFOLIO

- **splice-list** — List-compatible Java collection supporting explicit O(1) whole-list splicing without element copying; published to Maven Central. github.com/j-util/splice-list
- **inputstream-processor-core** — Dependency-free Java 8 core for incremental, format-neutral InputStream processing without materializing the full input; published to Maven Central. github.com/j-util/inputstream-processor-core
- **version-gate** (in progress) — Coordination core for publishing multi-component immutable snapshots as one visible version through fenced builds and atomic activation. github.com/k-barseghyan/version-gate
- **ai-document-assistant** — RAG portfolio project for document ingestion, vector retrieval, and question answering using FastAPI, Ollama, Qdrant, and Docker. github.com/k-barseghyan/ai-document-assistant

ADDITIONAL FINANCIAL LEADERSHIP EXPERIENCE

Group Chief Accountant — SAS Group Armenia (2016–2017)

Chief Accountant — Marriott International (2013–2015)

Financial Advisor — Contract

Expertise: financial reporting, budgeting, financial modeling, accounting systems, and commercial financial operations.

EDUCATION

Master's Degree in Commerce — Armenian State University of Economics
